Lexium

Discover Lexium

Advanced motion control and robotics

Lexium servo drives, motors, and robotics series are designed for a broad range of motion-centric machines. From single-axis to high-performance multi-axis machines, the **Lexium** range enables high-speed movements and precise positioning in packaging, material handling, material working, electronics, and food and beverage applications.

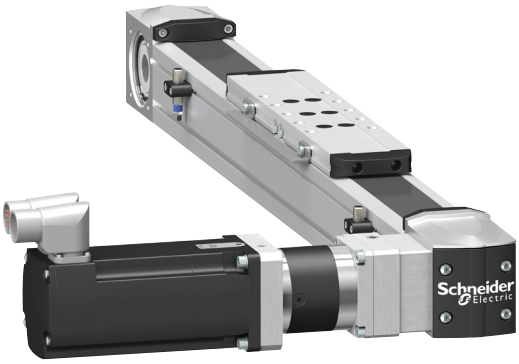
Lexium PAS, PAD

Portal axes with movable carriage and fixed axis

Lexium PAS4●B portal axes



Lexium PAS4●B portal axes with motor and gearbox mounted

Presentation *(1)*

Lexium PAS4●B are ready-to-install portal axes with toothed belt drive and one linear guide in four sizes. The axis profile is fixed in place and the load is mounted on the movable carriage. The portal axes are ideally suited for the transport of heavy loads with short and long strokes.

- The very high speeds and accelerations of the Lexium PAS4●B portal axes enable very short positioning times. The high feed forces with good repeatability are made possible by the steel tension members in the toothed belt. The fabric coating of the toothed belt ensures friction-optimized in and out toothing and thus quiet and smooth movement.
- Two types of guides are available for transmitting the load to the axis profile designed using FEM:
  - The recirculating ball bearing guide is particularly suitable for applications with high force and torque loads.
  - The roller guide is a cost-optimized guide and is suitable for applications with lower force and torque loads.
- The individual forces (Fx, Fy, Fz) and torques (Mx, My, Mz) of the Lexium PAS4●B portal axes are designed for a very long service life of 30,000 km *(18,641 miles)*. If the specified forces and torques are not reached, the service life of the Lexium PAS4●B portal axes increase.
- The T-slots at the bottom and on both sides of the axis profile can be used to fasten the Lexium PAS4●B portal axes. The portal axes are typically used horizontally, but can also be mounted vertically, laterally or overhead. The permissible forces and torques do not change.
- The Lexium PAS4●B portal axes are available with different carriage lengths and with up to three driven carriages. An optionally selectable cover strip is used to protect internal components such as toothed belt and linear guide. Furthermore, an antistatic toothed belt and various sensors can be selected as options.
- The Lexium PAS4●B portal axes can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications with the following requirements:

- Positioning over long distances: material handling, palletizers, etc.
- Positioning of parts at high speeds: flying shear, optical and measuring applications, labeling, etc.
- High feed forces: hoisting, cutting, machining, etc.

Special product features

- Stroke deliverable per millimeter
- Carriage with threaded holes and centering for reproducible load mounting
- Exchangeable grease nipples, for example to mount an automatic lubrication system
- Motor and gearbox assembly via flexible coupling system on both sides of the end blocks
- Sensors movable in T-slot
- Customized special solutions on request

The PAS42BB with ball guiding is suitable for clean room applications with the following configurations:	
Fraunhofer TESTED DEVICE IPA	Standard clean room class PAS42BBM1000A1NA●●●R - Clean room class 6 (ISO14644-1) 1.8 m/s *(5.91 ft/s)* with 10 kg *(22.05 lb)* load - Clean room class 6 (ISO14644-1) at 0.5 m/s *(1.64 ft/s)* with 10 kg *(22.05 lb)* load
Fraunhofer TESTED DEVICE IPA	Increased clean room class PAS42BBM1000A1RA●●●R - Clean room class 5 (ISO14644-1) at 1.8 m/s *(5.91 ft/s)* with 10 kg *(22.05 lb)* load - Clean room class 4 (ISO14644-1) at 0.5 m/s *(1.64 ft/s)* with 10 kg *(22.05 lb)* load
Fraunhofer TESTED DEVICE IPA	Increased clean room class PAS42BBM1000A1RA●●●R with suction 11.7 m³/h *(60.03 cu ft/h)* - Clean room class 2 (ISO14644-1) at 1.8 m/s *(5.91 ft/s)* with 10 kg *(22.05 lb)* load - Clean room class 1 (ISO14644-1) at 1.0 m/s *(3.28 ft/s)* with 10 kg *(22.05 lb)* load

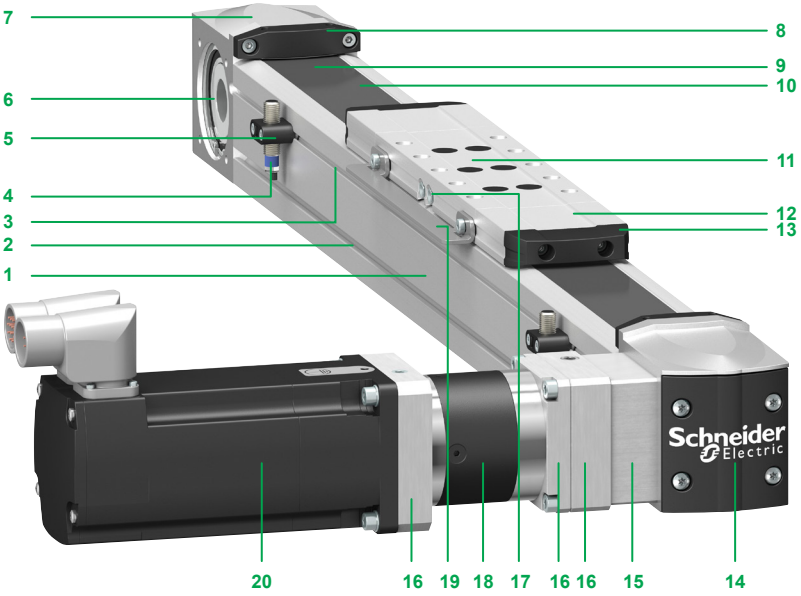
(1) Technical data (characteristics, dimensions, etc.) for Lexium PAS4●B portal axes are available on the product data sheet.

Lexium PAS, PAD

Portal axes with movable carriage and fixed axis

Lexium PAS4●B portal axes

Description *(1) (2)*



1 Axis profile
2 T-slots for mounting the axis (on both sides and on lower side)
3 T-slot for positioning the sensor holders (on both sides)
4 Sensor with cable and connector (two per axis, optional equipment)
5 Sensor holder (two per axis, optional equipment)
6 Toothed belt pulley with hollow shaft (in each end block)
7 End block (two per axis)
8 Cover strip clamp (two per axis, optional equipment)
9 Cover strip (optional equipment)
10 Toothed belt (hidden, under the cover strip)
11 Carriage with threaded holes and centering for reproducible load mounting
12 Strip deflector (two per axis, optional equipment)
13 Rubber buffer (two per axis)
14 End block cover (at each end block)
15 Coupling housing (optional equipment)
16 Adaptation plate (optional equipment)
17 Exchangeable grease nipples on each side of the carriage (two per side)
18 Gearbox (optional equipment)
19 Contact plate (optional equipment)
20 Motor (optional equipment)

(1) Technical data (characteristics, dimensions, etc.) for Lexium PAS4●B portal axes are available on the product data sheet.
(2) Description of a Lexium PAS4●B portal axis; the configuration options selected will determine whether or not certain components are included.

Lexium PAS, PAD

Portal axes with movable carriage and fixed axis

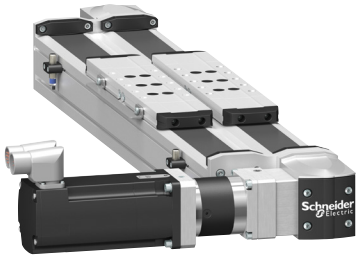
Lexium PAD4 portal axes

PAD42BB

PAD42EB



PAD42PB

Lexium PAD4 portal axes with motor and gearbox mounted

Presentation *(1)*

Lexium PAD4 are ready-to-install portal axes with toothed belt drive and two linear guides in three drive designs. The axis profile is fixed in place and the load is mounted on the movable carriage couple or single carriage. The portal axes are ideally suited for the transport of heavy loads with short and long strokes.

- The designs differ in the number and type of driven toothed belts:
  - Carriage couple driven by two coupled toothed belts: higher dynamics
  - Individual carriages, each driven with one toothed belt for independent movements of the carriages: more flexibility
  - Carriage couple driven by one toothed belt: cost-optimized solution
- The very high speeds and accelerations of the Lexium PAD4 portal axes enable very short positioning times. The high feed forces with good repeatability are made possible by the steel tension members in the toothed belt. The fabric coating of the toothed belt ensures friction-optimized in and out toothing and thus quiet and smooth movement.
- One type of guide is available for transmitting the load to the axis profile designed using FEM:
  - The double recirculating ball bearing guide in combination with the very rigid axis profile is particularly suitable for applications with lateral torsional torque (Mx) or applications with very high force and torque loads.
- The individual forces (Fx, Fy, Fz) and torques (Mx, My, Mz) of the Lexium PAD4 portal axes are designed for a very long service life of 30,000 km *(18,641.13 miles)*. If the specified forces and torques are not reached, the service life of the Lexium PAD4 portal axes increase.
- The T-slots at the bottom and on both sides of the axis profile can be used to fasten the Lexium PAD4 portal axes. The portal axes are typically used horizontally, but can also be mounted vertically, laterally or overhead. The permissible forces and torques do not change.
- The Lexium PAD4 portal axes are available with different carriage lengths and with up to three driven carriages. An optionally selectable cover strip is used to protect internal components such as toothed belt and linear guide. Furthermore, an antistatic toothed belt and various sensors can be selected as options.
- The Lexium PAD4 portal axes can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications with the following requirements:

- Positioning over long distances: material handling, palletizers, etc.
- Positioning of parts at high speeds: flying shear, optical and measuring applications, labeling, etc.
- High feed forces: hoisting, cutting, machining, etc.

Special product features

- Stroke deliverable per millimeter
- Carriage with threaded holes and centering for reproducible load mounting
- Exchangeable grease nipples, for example to mount an automatic lubrication system
- Motor and gearbox assembly via flexible coupling system on both sides of the end blocks
- Sensors movable in T-slot
- Customized special solutions on request

(1) Technical data (characteristics, dimensions, etc.) for Lexium PAD4 portal axes are available on the product data sheet.

Lexium PAS, PAD

Portal axes with movable carriage and fixed axis

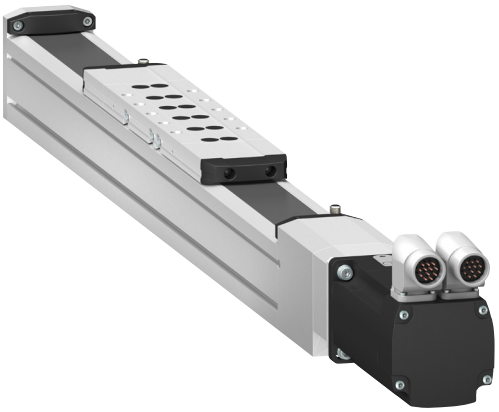
Lexium PAS4●S portal axes



Lexium PAS4●S portal axes with motor and gearbox mounted

Presentation *(1)*

Lexium PAS4●S are ready-to-install portal axes with ballscrew and one linear guide in three sizes. The axis profile is fixed in place and the load is mounted on the movable carriage. The portal axes are ideally suited for applications with high feed force and for the transport of heavy loads at medium speeds.

- The very good repeatability of the Lexium PAS4●S portal axes is made possible by the ballscrew. To adapt the feed forces, speeds and accelerations to the application, three ballscrew pitches are available for each size. The optionally available ballscrew supports enables higher speeds with longer strokes at the same time.
- One type of guide is available for transmitting the load to the axis profile designed using FEM:
  - The recirculating ball bearing guide is particularly suitable for applications with high forces and torques.
- The individual forces (Fx, Fy, Fz) and torques (Mx, My, Mz) of the Lexium PAS4●S portal axes are designed for a long service life of 10,000 km. If the specified forces and torques are not reached, the service life of the Lexium PAS4●S portal axes increase.
- The T-slots at the bottom and on both sides of the axis profile can be used to fasten the Lexium PAS4●S portal axes. The portal axes are typically used horizontally, but can also be mounted vertically, laterally or overhead. The permissible forces and torques do not change.
- The Lexium PAS4●S portal axes are available with different carriage lengths and with up to two additional non-driven carriages. An optionally selectable cover strip is used to protect internal components, such as ballscrew and linear guide. Furthermore, various sensors can be selected as an option.
- The Lexium PAS4●S portal axes can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications with the following requirements:

- A precision feed movement and guiding, even at variable loads and torques
- High feed forces: clamping, cutting, etc.
- Precise positioning and repeatability: optical and measuring applications, etc.

Special product features

- Stroke deliverable per millimeter
- Carriage with threaded holes and centering for reproducible load mounting
- Exchangeable grease nipples, for example to mount an automatic lubrication system
- Motor and gearbox assembly via flexible coupling system on both sides of the end blocks
- Sensors movable in T-slot
- Customized special solutions on request

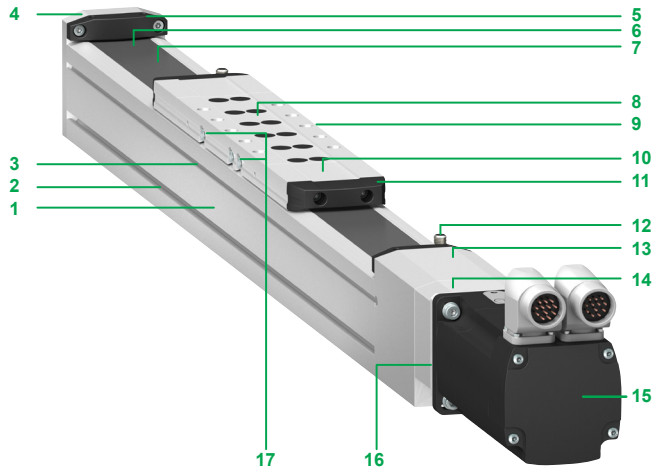
(1) Technical data (characteristics, dimensions, etc.) for Lexium PAS4●S portal axes are available on the product data sheet.

Lexium PAS, PAD

Portal axes with movable carriage and fixed axis

Lexium PAS4●S portal axes

Description *(1) (2)*



1 Axis profile
2 T-slots for mounting the axis (on both sides and on lower side)
3 T-slot for positioning the sensor holders (on both sides)
4 End plate
5 Cover strip clamp (two per axis, optional equipment)
6 Cover strip (optional equipment)
7 Ballscrew (hidden, under the cover strip)
8 Carriage with threaded holes and centering for reproducible load mounting
9 Contact plate (hidden, on the side of the carraige, optional equipment)
10 Strip deflector (two per axis, optional equipment)
11 Rubber buffer (two per axis)
12 Sensor with cable, connector and sensor holder (two per axis, optional equipment)
13 Drive block with drive shaft
14 Coupling housing (optional equipment)
15 Motor (optional equipment)
16 Adaptation plate (optional equipment)
17 Exchangeable grease nipples on each side of the carriage (three per side)

Lexium TAS

Linear tables with movable carriage and fixed axis profile

Lexium TAS4 linear tables

Lexium TAS4 linear table with motor mounted

Presentation *(1)*

Lexium TAS4 are ready-to-install linear tables with ball screw and two linear guides in three sizes. The axis profile is fixed in place and the load is mounted on the movable carriage. The linear tables are ideally suited for applications with high feed force and for the transport of heavy loads at medium speeds.

- The very good repeatability of the Lexium TAS4 linear tables is made possible by the ball screw. To adapt the feed forces, speeds and accelerations to the application, three ball screw pitches are available for each size.
- One type of guide is available for transmitting the load to the axis profile designed using FEM:
  - The double recirculating ball bearing guide in combination with the rigid axis profile is particularly suitable for applications with lateral torsional torque (Mx) or applications with very high force and torque loads.
- The individual forces (Fx, Fy, Fz) and torques (Mx, My, Mz) of the Lexium TAS4 tables are designed for a long service life of 10,000 km *(6,214 miles)*. If the specified forces and torques are not reached, the service life of the Lexium TAS4 linear tables increase.
- The T-slots at the bottom and on both sides of the axis profile can be used to fasten the Lexium TAS4 linear tables. The linear tables are typically used horizontally, but can also be mounted vertically, laterally or overhead.
- The linear tables Lexium TAS4 are optionally available with bellows to protect internal components, such as ball screw and linear guide. Furthermore, internal sensors and a belt drive can be selected as options. The belt drive can be mounted in four different positions.
- The Lexium TAS4 linear tables can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications with the following requirements:

- Feed movement without mechanical backlash: cutting, separating, labeling, etc.
- High feed forces: clamping, machining, etc.
- Precise movement of heavy loads: material handling, etc.
- Precise positioning: optical applications, laser use, etc.

Special product features

- Stroke deliverable per millimeter
- Carriage with threaded holes and centering for reproducible load mounting
- Exchangeable grease nipples, for example to mount an automatic lubrication system
- Motor and gearbox assembly via flexible coupling system
- Sensors movable in T-slot
- Customized special solutions on request

(1) Technical data (characteristics, dimensions, etc.) for Lexium TAS4 linear tables are available on the product data sheet.

Lexium CAS, CAR

Cantilever axes with moveable axis profile or end plates and fixed drive block

Lexium CAS4 cantilever axes

Lexium CAS4 cantilever axes with motor and gearbox mounted

Presentation *(1)*

Lexium CAS4 are ready-to-install cantilever axes with toothed belt drive and one linear guide in four sizes. In contrast to the portal axes, the carriage and the drive block are fixed in place. The load is mounted on the movable axis profile or on one of the two end plates attached to the axis profile. The cantilever axes are ideal for lifting heavy loads with short and long strokes.

- The medium speeds and high accelerations of the Lexium CAS4 cantilever axes enable short positioning times. The high feed forces with good repeatability are made possible by the steel tension members in the toothed belt. The fabric coating of the toothed belt ensures friction-optimized in and out toothing and thus quiet and smooth movement.
- Two types of guides are available for transmitting the load to the axis profile designed using FEM:
  - The double ball guide is particularly suitable for applications with high force and torque loads.
  - The roller guide is a cost-optimized guide and is suitable for applications with lower force and torque loads.
- The individual forces (Fx, Fy, Fz) and torques (Mx, My, Mz) of the Lexium CAS4 cantilever axes are designed for a long service life of 15,000 km *(9,321 miles)*. If the specified forces and torques are not reached, the service life of the Lexium CAS4 cantilever axes increase.
- The threads in the carriage can be used to fasten the Lexium CAS4 cantilever axes. The cantilever axes are typically used vertically, but can also be mounted horizontally, laterally or overhead. The permissible forces and torques do not change.
- The Lexium CAS4 cantilever axes are optionally available with a cover strip to protect internal components, such as linear guide. Furthermore, an antistatic toothed belt and various sensors can be selected as options.

The Lexium CAS4 cantilever axes can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications with the following requirements:

- Loop-back movement within a work area: pusher, etc.
- High feed forces: clamping, cutting, etc.
- Positioning over long distances: material handling, etc.

Special product features

- Stroke deliverable per millimeter
- End plates and carriage with threaded holes and centering for reproducible load mounting
- Exchangeable grease nipples, for example to mount an automatic lubrication system
- Easy maintenance due to lubrication at each stroke position and grease nipples on both sides of the carriage
- Motor and gearbox assembly via flexible coupling system on all four sides of the end blocks
- Sensors movable in T-slot
- Customized special solutions on request

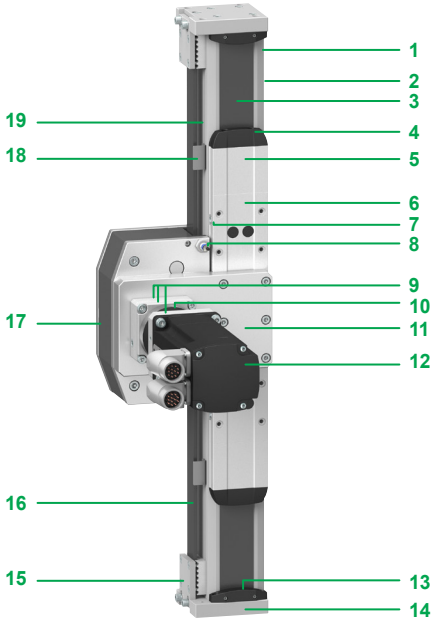
(1) Technical data (characteristics, dimensions, etc.) for Lexium CAS4 cantilever axes are available on the product data sheet.

Lexium CAS, CAR

Cantilever axes with moveable axis profile or end plates and fixed drive block

Lexium CAS4 cantilever axes

Description *(1) (2)*



1 Axis profile
2 T-slots for mounting the load (on one side and on the back)
3 Cover strip (optional equipment)
4 Rubber buffer (two per axis)
5 Strip deflector (two per axis, optional equipment)
6 Carriage with threaded holes and centering for reproducible axis mounting
7 Exchangeable grease nipples on each side of the carriage (two per side)
8 Sensor with cable and connector (two per axis, optional equipment)
9 Adaptation plate (optional equipment)
10 Gearbox (optional equipment)
11 Drive block including toothed belt pulley with hollow shaft
12 Motor (optional equipment)
13 Cover strip clamp (two per axis, optional equipment)
14 End plate with threaded holes and centering for reproducible load mounting (two per axis)
15 Toothed belt tensioner (two per axis)
16 Toothed belt
17 Drive block cover
18 Contact plate (two per axis)
19 T-slot for positioning the contact plate

Mechanical characteristics *(1)*

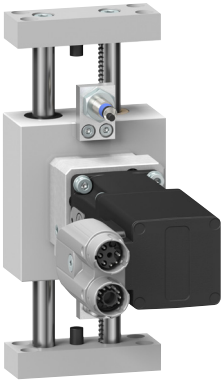
Cantilever axes with moveable axis body or end plates and fixed drive block

Lexium CAR4 cantilever axes



Lexium CAR40R cantilever axes with motor mounted

Lexium CAR4•B cantilever axes with motor and gearbox mounted

Presentation *(1)*

Lexium CAR4 are ready-to-install cantilever axes with toothed belt or gear rack drive and two linear guides in five sizes. In contrast to the portal axes, the axis body is fixed in place. The load is mounted on one of the two movable end plates. The cantilever axes are ideal for lifting medium loads with medium strokes.

- The medium speeds and accelerations of the Lexium CAR4 cantilever axes enable short positioning times. The medium feed forces with good repeatability are made possible by the steel tension members in the toothed belt.
- One type of guide is available for transmitting the load to the axis body:
  - The linear ball bearing guide is particularly suitable for applications with low to medium force and torque loads.
- The individual forces (Fy, Fz) and torques (Mx, My, Mz) of the Lexium CAR4 cantilever axes are designed for a long service life of 15,000 km *(9,321 miles)*. If the specified forces and torques are not reached, the service life of the Lexium CAR4 cantilever axes increase.
- The threads or the T-slots in the axis body can be used to fasten the Lexium CAR4 cantilever axes. The cantilever axes are typically used vertically, but can also be mounted horizontally, laterally or overhead. The permissible forces and torques do not change.
- The Lexium CAR4 cantilever axes are optionally available with antistatic toothed belt and various sensors.
- The Lexium CAR4 cantilever axes can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications with the following requirements:

- High-speed positioning for short working distances: material handling, etc.
- High feed forces: clamping, assembly, etc.

Special product features

- Stroke deliverable per millimeter
- Low moving net mass
- End plates with threaded holes and centering for reproducible load mounting
- Linear ball bearing guide lubricated for life
- Motor and gearbox assembly via flexible coupling system
- Customized special solutions on request

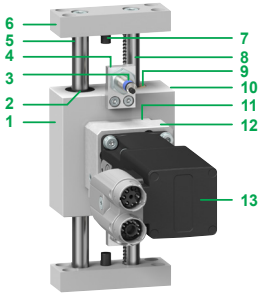
(1) Technical data (characteristics, dimensions, etc.) for Lexium CAR4 cantilever axes are available on the product data sheet.

Lexium CAS, CAR

Cantilever axes with moveable axis body or end plates and fixed drive block

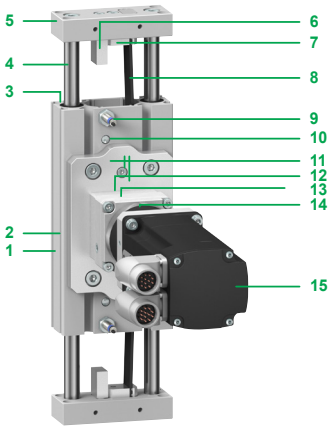
Lexium CAR4 cantilever axes

Description *(1) (2)*



CAR40 with gear rack

1 Axis body including rack pinion with hollow shaft
2 Linear ball bearing (two per axis)
3 Sensor with cable and connector (two per axis, optional equipment)
4 Sensor holder (two per axis)
5 Guide rod
6 End plate with counterbore and centering for reproducible load mounting (two per axis)
7 Rubber buffer (two per axis)
8 Gear rack
9 Slide bearing (two per axis)
10 Threaded holes and centering for mounting the axis (on one side)
11 Coupling housing (optional equipment)
12 Adaptation plate (optional equipment)
13 Motor (optional equipment)



CAR41, CAR42, CAR43, CAR44 with toothed belt

1 Axis body including toothed belt pulley with hollow shaft
2 Threaded holes and centering for mounting the axis (CAR41, on one side and on the back)
T-slots for mounting the axis (CAR42, CAR43, CAR44, on both sides and on the back)
3 Linear ball bearing (four per axis)
4 Guide rod (two per axis)
5 End plate with threaded holes, counterbore and centering for reproducible load mounting (two per axis)
6 Contact block (two per axis)
7 Toothed belt tensioner (two per axis)
8 Toothed belt
9 Sensor with cable and connector (two per axis, optional equipment)
10 Rubber buffer (two per axis, inside axis body)
11 Axis body adapter plate
12 Coupling housing (optional equipment)
13 Adaptation plate (optional equipment)
14 Gearbox (optional equipment)
15 Motor (optional equipment)

Mechanical characteristics *(1)*

Force and torque (Fx, Fy, Fz, Mx, My, Mz) are calculated for a service life of 15,000 km *(9,321 miles)*

Type of cantilever axis		CAR40RC	CAR41BC	CAR42BC	CAR43BC	CAR44BC
Axis body cross-section (width x height)	**mm *(in)***	**Size 0**: 66 x 30 *(2.6 x 1.18)*	**Size 1**: 80 x 30 *(3.15 x 1.18)*	**Size 2**: 100 x 40 *(3.9 x 1.57)*	**Size 3**: 120 x 50 *(4.7 x 1.97)*	**Size 4**: 160 x 50 *(6.3 x 1.97)*

Lexium CAS, CAR

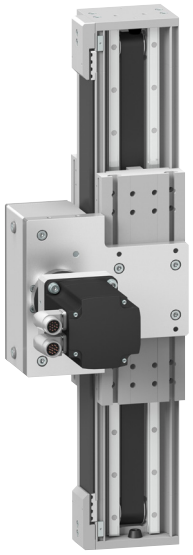
Cantilever axes with moveable axis profile or end plates and fixed drive block

Lexium CAS2 telescopic axes



Lexium CAS2 telescopic axes with motor and gearbox mounted

Presentation *(1)*

Lexium CAS2 is a read y-to-install telescopic axis with toothed belt drive and four linear guides with a telescopic carriage. In contrast to the portal axes, the drive block of the telescopic axis is fixed in place. The load is mounted on the moveable telescopic carriage, which in turn is located on the also moveable axis profile. Due to this design, the total length is shorter than the stroke for strokes bigger than 1 m, as the total length only increases by half the stroke. The telescopic axis is ideally suited for the transport of medium loads with medium strokes.

- The medium speeds and accelerations of the Lexium CAS2 telescopic axes enable short positioning times. The medium feed forces with good repeatability are made possible by the steel tension members in the toothed belt.
- One type of guide is available for transmitting the load to the axis profile:
  - The double recirculating ball bearing guide is particularly suitable for applications with lateral torsional torque (Mx) and medium force and torque loads.
- The individual forces (Fx, Fy, Fz) and torques (Mx, My, Mz) of the Lexium CAS2 telescopic axes are designed for a long service life of 15,000 km. If the specified forces and torques are not reached, the service life of the Lexium CAS2 telescopic axes increase.
- The T-slots in the carriage of the drive block can be used to fasten the Lexium CAS2 telescopic axes. The telescopic axis is typically used horizontally, but can also be mounted vertically, laterally or overhead. The permissible forces and torques do not change.
- The Lexium CAS2 telescopic axes are available with different carriage lengths.
- The Lexium CAS2 telescopic axes can be combined with all motors and / or gearboxes offered by Schneider Electric. The mounting of third-party motors and / or third-party gearboxes is also possible.

Applications

Applications requiring positioning over long distances where space is at a premium:

- Material handling
- Stock transporters
- Transfer machines
- Etc.

Special product features

- Stroke deliverable per millimeter
- Double stroke length with single total length increase
- Low moving net mass
- Easy maintenance due to lubrication at each stroke position
- Sensor contact block movable in T-slot
- Customized special solutions on request

(1) Technical data (characteristics, dimensions, etc.) for Lexium CAS2 telescopic axes are available on the product data sheet.

Lexium MAX

Cartesian multi axes systems for 1-, 2-, 3-dimensional positioning solutions

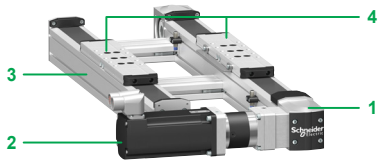
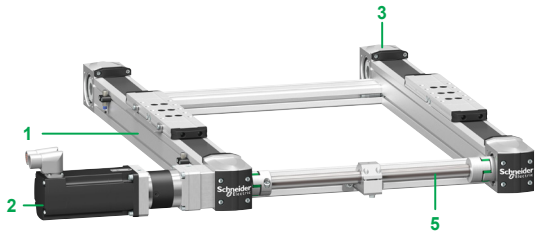
Lexium MAXH / MAXS double portal axes



Lexium MAXH double portal axes with motor and gearbox mounted



Lexium MAXS double portal axes with motor and gearbox mounted

Presentation *(1)*

Lexium MAXH and Lexium MAXS double portal axes are linear motion axes.
They consist of two PASB portal axes mounted in parallel with:

- First axis (**1**) driven by drive unit (**2**)
- Second axis (**3**) driven by:
  - MAXH: the load mounted on the two carriages (**4**)
  - MAXS: the synchronous shaft (**5**)

The carriages are driven by a toothed belt, available with either a roller guide or a ball guide.

- MAX●2BB, MAX●3BB and MAX●4BB axes, with a ball guide, are particularly suitable for applications requiring high forces and significant torque.
The roller guides on MAX●1BR, MAX●2BR and MAX●3BR axes offer a simple and cost-effective guiding solution for other applications.
- Lexium MAXH / MAXS double portal axes can provide a solution to applications requiring positioning of heavy loads over a long stroke with a high dynamic response.
- Lexium MAXH and Lexium MAXS double portal axes offer different configuration options, including axis length, different types of sensor for the limit switch function, addition of a cover strip, the choice between several types and sizes of carriage, the option of having up to three carriages, an anti-static toothed belt, and an anti-corrosion version (see page 45).
- Schneider Electric offers numerous drive units for driving Lexium MAXH and Lexium MAXS axes (see pages 40 and 46).
Third-party drive units can also be used under certain conditions. Contact our Customer Care Center for further details.

Applications

Applications with the following requirements:

- Positioning of heavy loads and/or involving large surface areas: material handling, etc.
- Positioning over long distances: material handling, Pick & Place, etc.

Special product features

- Profiles with T-slots on 3 sides for simple integration into existing structures
- Carriage with centering tapped holes for mounting the load
- Grease nipples accessible on each side of the carriages to simplify routine maintenance
- Quick-coupling system for easy motor assembly
- Stroke in various lengths available per millimeter
- Option to position sensors anywhere along the profile thanks to the T-slots

(1) Technical data (characteristics, dimensions, etc.) for Lexium MAXH / MAXS double portal axes are available on the product data sheet. The load, force and torque data indicated in all the documents relates to carriages mounted on a rigid mechanical structure with a centrally mounted load.

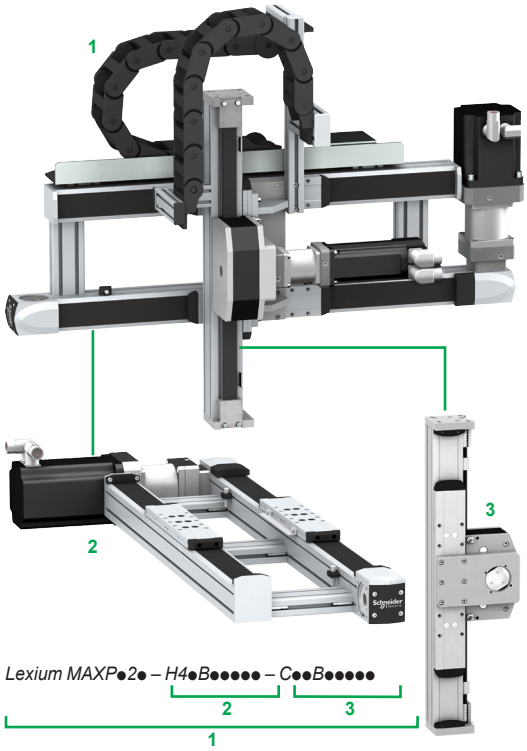
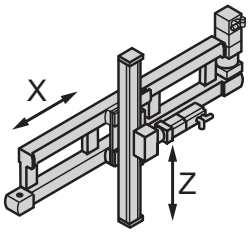
Lexium MAXP linear positioners



Presentation *(1)*

Lexium MAXP linear positioners (1) are multi axes systems for linear motion in directions X and Z:



They consist of two axes with:

- A Lexium MAXH double portal axes providing motion in direction X (2)
- A Lexium CAS4 or Lexium CAR4 cantilever axis providing motion in direction Z (3)

Each carriage is driven by a toothed belt, available with either a roller guide or a ball guide.

Lexium MAXP linear positioners operate above or below the working area. They provide an effective solution to dynamic load handling. Depending on the model, loads can be moved as far as 5,500 mm *(216.53 in)* in direction X and 1,800 mm *(70.86 in)* in direction Z.
These linear positioners offer different configuration options for each axis, including length, choice of different sizes and types of profile, and a choice of different types of guide (see next page).
Schneider Electric offers numerous drive elements for driving Lexium MAXP linear positioners.
Since the choice and combination of these drive elements is specific to each application, you will need to contact our Customer Care Center.

Applications

Applications requiring dynamic load positioning:

- Material handling
- Pick & Place
- Etc.

Special p uct features

- Numerous adaptation possibilities thanks to its modular design

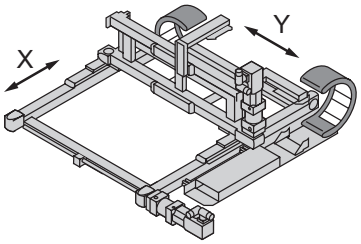
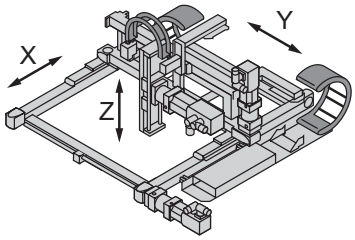
Presentation *(1)*

Lexium MAXR●2 (**1**) and Lexium MAXR●3 (**5**) portal robots are multi axes linear motion systems.

- Lexium MAXR●2 portal robots (**1**) allow motion in directions X and Y.
- Lexium MAXR●3 portal robots (**5**) offer additional motion in direction Z.

Lexium MAXR●2 portal robot	Lexium MAXR●3 portal robot
	




- Lexium MAXR●2 portal robots (**1**) consist of two axes:
  - a Lexium MAXS double portal axis providing motion in direction X (**2**)
  - a Lexium MAXH double portal axis or a Lexium PAS4●B portal axis providing motion in direction Y (**3**)
- Lexium MAXR●3 portal robots (**5**) consist of three axes:
  - a Lexium MAXS double portal axis providing motion in direction X (**2**)
  - a Lexium MAXH double portal axis providing motion in direction Y (**3**)
  - a Lexium CAS4 or Lexium CAR4 cantilever axis providing motion in direction Z (**4**)

The carriages are driven by a toothed belt, available with either a roller guide or a ball guide.

- Lexium MAXR●2 and Lexium MAXR●3 portal robots operate above the working area. They provide an effective solution to load handling over long distances:
  - Lexium MAXR●2 portal robots: depending on the model, loads can be moved as far as 5,500 mm *(216.53 in)* in direction X and 1,500 mm *(59.06 in)* in direction Y
  - Lexium MAXR●3 portal robots: depending on the model, loads can be moved as far as 5,500 mm in direction X, 1,500 mm *(59.06 in)* in direction Y and 1,800 mm *(70.86 in)* in direction Z

These portal robots offer different configuration options for each axis, including length, choice of different sizes and types of profile, and a choice of different types of guide (see pages 52 and 53).
Schneider Electric offers numerous drive elements for driving Lexium MAXR●2 and Lexium MAXR●3 portal robots.
Since the choice and combination of these drive elements is specific to each application, you will need to contact our Customer Care Center.

Applications

Applications requiring load handling over long distances:

- Material handling
- Optics
- Pick & Place
- Etc.

Energy chain *(1)*

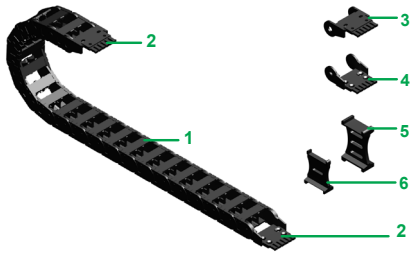
Presentation

Energy chains are developed to help guide and protect moving cables and hoses. They minimize downtime, provide protection and support, and help to extend the service life of the cables and hoses.
Energy chains are used in the MAXP●2, MAXR●2, MAXR●3 products.

The required total length of cable drag chain is calculated as follows: L = stroke/2 + K (mm)
For dimension K, see table dimension drawings. The total length L of the cable drag chain is composed of several sections. Use the formula to calculate the number of pieces to be ordered:

- Number of sections for series 1400 = L/500 (round up the result to the nearest integer)
- Number of sections for series 2400 = L/460 (round up the result to the nearest integer)
- Number of sections for series 2600 = L/560 (round up the result to the nearest integer)

Description



1 Cable drag chain contains a section with:
- 15 chain links (E02-1400-●●●-●●●●)
- 10 chain links (E02-2400-●●●-●●●● and E02-2600-●●●-●●●●)

2 2 connection elements with strain relief

Cable drag chain connector contains a pair of connectors with:
3 1x connection element bore with strain relief
4 1x connection element bolt with strain relief

2 types of cable drag chain separators:
5 three-slots type, for SPM3MAC26
6 one-slot type, for SPM3MAC14 and SPM3MAC24
